GREENVALE AP LTD (Potato Processing Plant) delighted with savings of 72.5%

Greenvale AP Ltd (Potato Processing Plant) in the UK installs Low Energy Designs **SunRAY 6** lights in their Production area saving 72.5% in energy costs and CO₂ emissions! They have also increased their output due to the quality of LED's lights!

This installation of LED Lighting has been so effective that there is already evidence to support the fact that the benefit of LED's extends beyond energy saving and is being seen to prolong the life of the actual potato by preventing it from going green! Tests are now underway at our factory in Dorset—results to be published next month!

LUSH in Dorset go ahead with our LED SkyLIGHTS!!

LUSH in Dorset are one of the country's leading ECO friendly companies and have selected Low Energy Designs, above all other LED products, to supply brand new **SkyLIGHTS** for their factory Head Office in Poole.

Delighted by a trial of **SkyLIGHTS** LUSH are keen to ensure their staff are working in a "green" environment and so have committed to installing LED lights throughout their factory.

Photographs and results to be published soon.

GREENVALE delighted with LED LIGHTING!!

Greenvale save 72.5% on Electricity and 72.5% on CO₂ emissions!! This was achieved by removing the existing 29 x fittings and replacing them with 21 x LED SunRAY 6 fittings.

Greenvale is a company keen to reduce their energy levels and carbon emissions. They agreed to a 28 day trial metering period during which they were able to experience the benefit of the LED SunRAY 6 light.

For this trial we installed our 21 x SunRAY 6 lights at a height of 5M with 5M spacing intervals between each row.

Results:

Greenvale existing 29 fittings over this period produced a consumption of 4255kW
LED's 21 x SunRAY6 fittings over this period produced a consumption of 1046kW
