**OFFICE LED
LIGHTING AT
IT'S BEST!**

The changing season is a great time to really take stock of things, to particularly make sure you are running your business as efficiently as you possibly can. At Low Energy Designs we can help you to control your internal costs, using leading edge technology with a proven track record. Our lighting systems can save up to 80% in energy costs when compared to traditional solutions. With the rising costs of electricity there has never been a better time to review your energy usage, and with lighting being a prime area of expenditure we are confident we can help save you money.

Product Focus – SunFIRE LED

This month our product focus is the efficient and stylish SunFIRE LED outdoor light fitting. Manufactured in the UK, our SunFIRE LED Light is capable of providing up to 70% cost savings compared with the traditional lighting solutions and is ideally suited to street, pathway and car park lighting. Customers have typically used our SunFIRE to replace 35-200 Watt HPS luminaires.

The SunFIRE uses high flux LEDs on thermally superior, modular boards. This technology combined with our unique software allows the user to influence the maximum temperature on the LED, thereby enhancing the life of the product and offering big savings on the ever increasing maintenance costs.

Optional remote control also provides the customer with the ability to customise the light to meet their individual needs, offering additional savings from dimming & PIR movement activation.

COMBAT "SAD" - (Seasonal Affective Disorder)

SAD, is officially recognised as a medical condition thought to affect 2 million people in the UK and Ireland. Changing job roles mean less than 10% of the population work in natural outdoor light. The summer months are not a problem, but in other seasons people often don't get enough natural daylight.

By providing summertime levels of light all year round you can successfully alleviate the symptoms of SAD, with the result that sufferers can lead more normal, happier lifestyles. Historically this could only be done with special light-box therapy, but with Low Energy Designs LED technology our products can produce the type of daylight simulation needed.

It's great to know that whilst our LED lights will save you money on energy costs they can also be extremely good for your health too!

**OFFICE LIGHTING

ENVIRONMENT
FOR YOUR STAFF!**

Coming Next Month:-

**We attend IAC Show in
Cape Town**

**Our Street Lights are a
big success in
Stockholm**

New member of the team!

Low Energy Designs are pleased to announce the arrival of new Sales Consultant Caitlin Cundell, who will boost the existing team. With a high level of industry experience, she will have a focus on companies in the South and East of the UK. CEO Alan Parker states, "Caitlin comes from a really strong professional sales background and will be a great addition to our growing business. Her appointment will offer our customers another resource to help identify their needs and offer appropriate solutions."

With her most recent roles having been focused on the housing sector, Caitlin is well placed to understand the requirements of customers looking for solutions that meet their own very particular requirements. Her focus will be on working with a growing customer base and will include the offer of a free initial survey of their lighting needs. "I am really pleased to be part of such a dynamic business, whose high emphasis on customer service so closely matches my own," said Caitlin.

Contact us for a free site survey with one of our technical team who will provide you with a full assessment of your current lighting and a calculation of return investment to enable you to make these cost-effective improvements. Give us a call now on **01258 858171** and we can arrange for an adviser to get in touch.

**Please contact us for further information or visit our website www.lowenergydesigns.com
