OUR OFFICE LED SKYLIGHTS CREATE A CONTEMPORARY FEATURE IN WALKWAYS WITH THEIR DISCREET AND SLEEK DESIGN.

Our LED Skylight panel has become increasingly popular with many new and existing customers. The LED ceiling panel light has proven to provide energy savings of up to 87%, compared with traditional T8 or even T5 fluorescent fittings. The product is ideally suited to office or shop applications, either mounted into the suspended ceiling or as a pendant hanging from ceilings.

The SkyLight is manufactured to produce an even light spread across the diffused acrylic lens, providing a light quality that is very similar to daylight. The SkyLight is housed inside a metal surround to ensure it meets all fire regulations, and can therefore be used in schools, hospitals etc. The product also has an easy wipe surface which is perfect for health care, food production or clean room environments.

Typically we have used between 10 to 25% less fittings when installing the SkyLight LED fittings in existing applications, also daylight dimming, occupancy PIR dimming and activation can be made available; all saving customers a significant amount of money.

Looking back at 2012

This is often the time when we look back at the previous year and reflect on what has been achieved.

For Low Energy Designs it has been a great year, with many notable successes.

One highlight was the pride we gained from having been chosen to supply our LED solar sign lighting as part of the 2012 Olympic Games!

We also saw the business grow at a time when many were contracting, having exceeded our targets. Our new premises and expanded team have all given us a great platform to move forward from; so we are pleased to say that 2013 looks like being a very bright year!

PAGE 2- A NEW YEAR AHEAD.

The start of the New Year is always a good time for reflection, with many people making resolutions for the months to come. So, how about a simple resolution, that we can certainly help you with. Reduce your electricity spend; saving you money and helping the environment.

By installing Low Energy Designs' industry leading LED lighting systems you can achieve these objectives, at a price that won't break the bank.

Our customers also note that the quality of light produced is a major improvement on that from more traditional technology. Some examples of our recent successes are below.

Contact us for a free site survey with one of our technical team who will provide you with full assessment of your current lighting and a calculation of return investment to enable you to make these cost-effective improvements.

Give us a call now on **01258 858171** and we can arrange for an adviser to get in touch.

Please contact us for further information or visit our website www.lowenergydesigns.com for more case studies and our full product range.
