

MONTHLY NEWS

The installation of our LED products for the Dodowa Hospital in Ghana has begun!

NMSI have been doing a fantastic job to get the Dodowa Hospital finished! And now with the installation of our LED products they are closer to completing this ground-breaking task!

Our Solar SunFIRE's have a great life expectancy and work best in hotter climates. The installation is a simple process. (picture right) The solar panel will charge the SunFIRE throughout the day to provide an efficient, bright white light throughout the night.

If you are looking for a minimal maintenance product then the SunFIRE is for you. The lumen lifetime is 112,000 when operated at 80°C to L70 standard.

This extremely durable product has proven to withstand the most toughest conditions. With the SunFIRE installed on every continent, you will not find a more reliable LED product on the market today.

Our SunRAY LED's are a massive hit in aquariums!

Our most recent aquarium installation was at the end of 2014 at the Istanbul Sea Life Aquarium.

Our SunRAY LED's are a big hit in aquariums. With RGB colour changing we provide over 250,000 colour options and we can create a dusk to dawn colour change sequence, perfect for aquatic creatures seeking the replica of their natural habitat.

We can rotate the LED modules which hold the LED's to direct the light to specific areas, just like in the photo (top right) it's like rays of sunshine coming through the surface.

With a life expectancy that exceeds 84,000 hours, the SunRAY is an intelligent, minimal maintenance and extremely efficient LED product. This product has now been used extensively for over 7 years in aquariums throughout the world.
