

Automated Packaging LOVE our LED products!

When we first approached Automated Packaging they had 2 main goals, to reduce energy costs and become a more environmentally friendly company. With our knowledge and expertise we couldn't be more pleased to help this company become more profitable.

In the offices we replaced 81, 600 x 600 twins which were running at 80w each, for 65 of our SkyLIGHT 66 ELP LED's which run at 36w. The lights in the offices are on for 10 hours a day, 5 days a week, 52 weeks of the year and they are not always occupied, because of this we included a PIR where viable to help keep costs to a minimum.

Thanks to the high light levels from our SkyLIGHT we didn't have to replace one for one, we managed to use less lights than before whilst providing the appropriate light levels, saving Automated Packaging even more in operational costs.

The main factory consisted of 157 Tamlite Quad lights which were running at 250w each. The majority of these lights are on 24/7 52 weeks a year, the rest are on 24/5.

We replaced the Tamlite's for a mixture of our LumiOPTIMA 5218 and our LumiROD 416.

LumiROD 416

LumiOPTIMA 5215

We optimized each of our products to provide a dimmable option. This is normally used in areas where there is or can be low footfall. This option reduces power consumption which dims the lights according to the setting.
