

HUGE PROJECTS ARE COMING OUR WAY IN 2018

For 2018, we are extremely excited to introduce a brand new, state-of-the-art system. Our Chief Technical Officer has spent months in RnD, along with multiple trips across the world to design a new energy storage system which is capable of powering an average home or small business premises.

This unique intelligent power solution will provide power to locations in Africa where AC mains power is limited or unavailable. The project will also reduce the fossil fuels used in some of these locations.

Taking the African market by storm, we've also secured multiple projects to deploy our intelligent LED road lighting across hundreds of km—details on these will be issued within the next few months.

Follow us on [Facebook](#) and [Twitter](#) to stay up to date as we introduce the HESS system at the end of February 2018. Keep coming back to check out the status of our other projects. It's going to be an exciting year for us!
